

Eyad Arshad

AI Student • Software Developer • Game Engineer

Islamabad, Pakistan | +92 336 7611561 | eyadyr1967@gmail.com
[linkedin.com/in/eyadarshad](https://www.linkedin.com/in/eyadarshad) | github.com/eyadarshad | eyadinit.itch.io

Passionate third-year Artificial Intelligence student and hands-on developer specializing in **Computer Vision, Intelligent Systems, and Unreal Engine 5 Game Development**. Built HELIX — a high-accuracy AI malware detection system with online learning, and real-time YOLO-powered traffic management solutions. Currently serving as **COO at NeuroScout** while developing atmospheric horror games (Death Realm) and cross-platform applications. Strong believer in practical learning — turning ideas into production-ready, intelligent software.

Technical Skills

Languages: C++, Python, JavaScript, PHP, HTML5, CSS3

Frameworks & Tools: Qt 5/6, PyQt6, Flask, Bootstrap, SFML, Arduino

AI & Computer Vision: YOLOv8 (ONNX), OpenCV, scikit-learn, PE Analysis

Other: MySQL, Firebase, Git, REST APIs, IoT, Multithreading, RBAC

Game Development: Unreal Engine 5, Behavior Trees, NavMesh, Procedural Generation

Featured Projects

HELIX — AI-Powered Malware Detection System

Python · PyQt6 · scikit-learn · Flask · x86 Emulation

- Hybrid detection engine combining static PE features and behavioral emulation achieving **99.6% accuracy**
- Implemented distributed online learning architecture with central model retraining
- Real-time Windows background protection service with VirusTotal integration

Smart Traffic Management System

C++ · Qt · YOLOv8 · OpenCV · Arduino

- Real-time vehicle detection and 5-level density classification across multiple intersections
- Adaptive traffic signal timing with hardware control via Arduino
- Multi-threaded architecture for smooth camera processing and violation detection

Death Realm — First-Person Horror Game

Unreal Engine 5 · C++ · Blueprints · Behavior Trees

- Atmospheric horror game featuring procedurally generated mazes and intelligent AI enemies
- Built patrol, chase, and attack states with dynamic difficulty scaling
- Available on itch.io — focused on immersive survival gameplay

UtiliSOFT — Desktop ERP System

C++ · Qt 6 · MySQL

- Full-featured retail management system with 3-tier Role-Based Access Control
- 7 integrated modules including inventory, sales, debt tracking, and analytics

Leadership & Experience

Chief Operating Officer — NeuroScout 2026 – Present

Leading day-to-day operations, product development milestones, and cross-functional team coordination at a technology startup while managing full academic workload.

Education

Bachelor of Science in Artificial Intelligence

Air University, Islamabad | 2024 – 2028 (Expected)

Relevant Coursework: Machine Learning, Computer Vision, Data Structures, OOP, Computer Networks, Database Systems

g

Certifications

- HTML, CSS & JavaScript — IBM via Coursera (2024)
- Web Development Course — NICON, Islamabad (2019)
